CommonWell is driving health data exchange to help improve care coordination and health outcomes nationwide.

Our Vision
CommonWell Health Alliance is a not-for-profit trade association devoted to the simple vision that health data should be available to individuals and caregivers regardless of where care occurs. Additionally, access to this data must be built into health IT at a reasonable cost for use by a broad range of health care providers and the people they serve.

Our Approach
The average person sees more than 18 care providers in their lifetime. Each provider has their own electronic health record and other clinical data sources to manage their patients’ care. Most patients believe that their physicians have access to all their health data, but the reality is that health data is still very siloed.

CommonWell built a national interoperability infrastructure and person-centric network, starting with electronic health records (EHRs) and expanding across the care continuum into post-acute and patient-driven exchange. We are continuing to expand our reach by connection to other venues of care and with other health information networks and organizations, like Carequality.

How to Participate
Whether a health IT vendor, government agency, provider organization or individual, everyone has a role in improving health data exchange. CommonWell has many ways to participate and support our vision and mission including being a member, offering our services, using our services or advocating as a patient.

Data as of March 2020
“CommonWell enables providers to give patients what they thought they were already getting: a provider who knows their story. And this is possible because once linked in the CommonWell network, providers can access records immediately and electronically from other providers across the nation, not just locally … [CommonWell] is a game changer for the industry that is ultimately resulting in better value, vastly improved patient experience, reduced costs and decreased provider frustration.”

Dr. Arthur Lauretano
Chief Medical Officer
Circle Health (Lowell, Mass.)

Who is Connected
More than 15,000 provider sites in all 50 states, D.C. and Puerto Rico are live on CommonWell services, with more than 76 million unique individuals’ records available.

In addition, select CommonWell members are now offering the option to their CommonWell-enabled provider sites to connect and bilaterally exchange health data with Carequality-enabled care providers.

Connecting to the Network
CommonWell core services aim to enable health care practitioners to manage patient identity, link patients across organizations and facilitate secure data access and exchange beyond one’s own system or community. Our services are essential to the exchange of health data along the care continuum nationwide.

Record Locator
CommonWell matches patients and links each individual’s clinical encounters across the care continuum to the individual in CommonWell.

Record Locator Service
The CommonWell smart record locator service enables practitioners and patients to efficiently discover where a person’s data might be found by creating a “virtual table of contents” that specifies the where patient data may be available nationwide.

Data Broker
The data query and retrieval broker enables caregivers to search, potentially select and receive needed data across a trusted network.

Patient Identification & Linking

Data Broker

Trust Fabric

Trust Fabric has governance, policies and procedures in which the adopters of the service agree to operate. While CommonWell itself never stores clinical data, the platform uses a layered security approach to help ensure the safety of the clinical and demographic data being transferred.
